Shared predictive-screened AIC: conditional resampling stability
Fixed original folds and optimizer seeds; no species-probability interpretation
Selected K across 99 whole-locality draws per dataset
K=1
K=2
K=3
K=4
Conditional bootstrap frequency
All-unit pair frequency
Within point-cluster cohesion
Across point-cluster merging
Both-OOB pair coverage
cline n64
correlated gaussian n64
four n256 s3 0
four n64 s3 0
four n64 s4 5
independent gaussian n64
unequal variance n64
zero conditional gaussian n64
Independent datasets; five per cell
